

Our
remotes
ensure that
your drivers
can stay at
the point of
delivery

OptiControl, a new remote that provides complete control of your OptiMate metering system!

MechTronic are delighted to announce that we have been working with ALMA to design OptiControl, a new wireless remote control which supports and enables the complete management of your OptiMate delivery process. Our latest remote enables drivers to remain at the point of delivery without needing to return to the vehicle.

OptiControl enables drivers to completely manage the delivery process. It shows in real time, the delivery flow, compartment, current quantity, and preset volumes. Drivers are also able to perform product/compartment line changes and adjust preset deliveries as required.

A lightweight handheld remote that can be fastened on the arm of the driver if required and ATEX approved. The remote is also fully rechargeable in the truck cab, with a dedicated socket.

OptiControl features a range of additional benefits:

- Preset input and adjustment
- Product and compartment selection
- Litre counter repeater that displays the product being delivered, the compartment it is dispensing from, and the preset entered whilst displaying the current volume being delivered
- Large LCD screen
- Meter stop/start, slow fill and engine stop

For further information about this or any of our other outstanding products please call **0113 279 9661** or visit our website **www.mechtronic.ltd.uk**

Our remotes ensure that your drivers can stay at the point of delivery
